

webtext.tech 

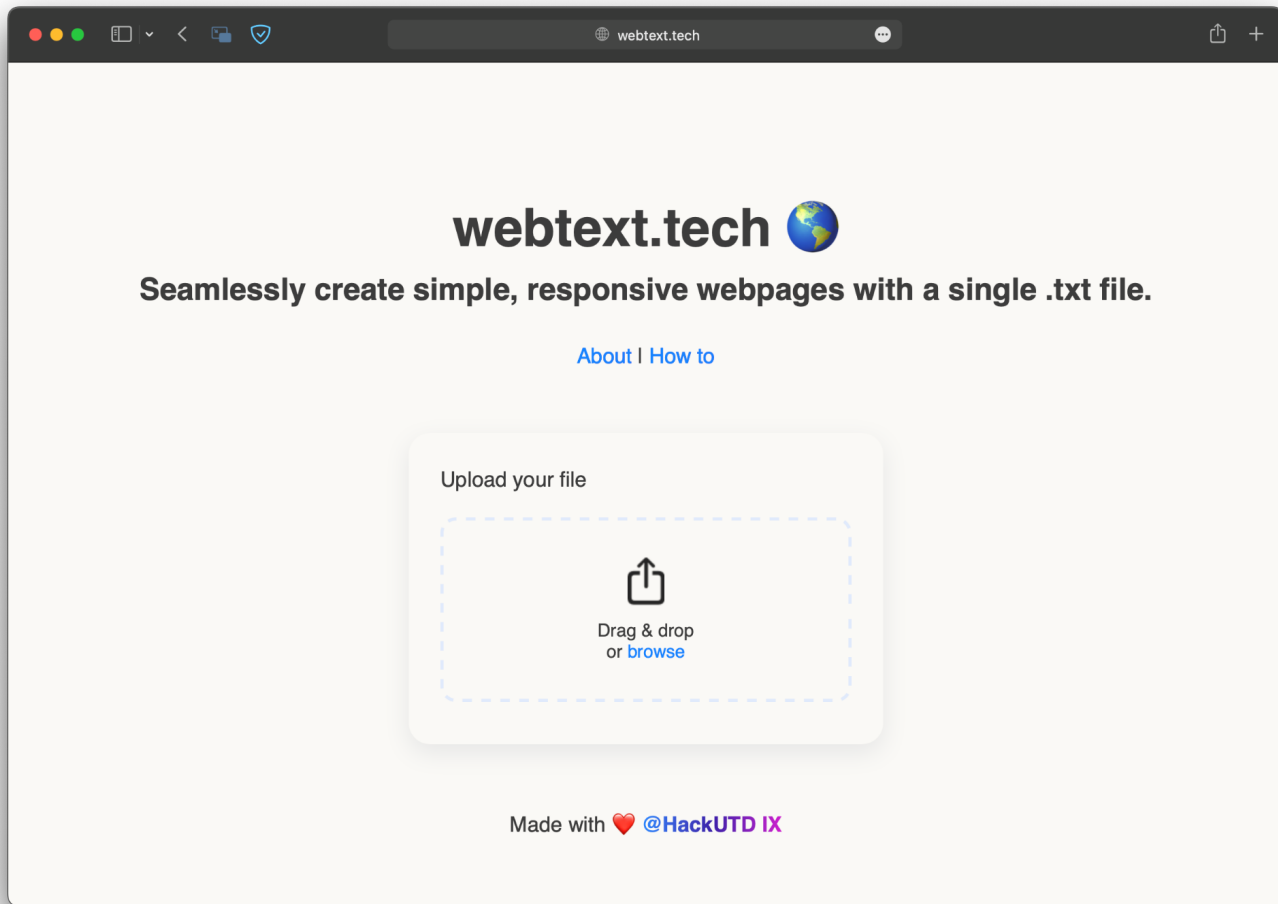

Democratizing the web

45%

of the world's population does not have access to high-speed internet.*

**Most websites are
heavy, clunky, and
cluttered. 🗑️**

We had an idea 

webtext.tech 

Seamlessly create simple, responsive webpages with a single .txt file.

How it works

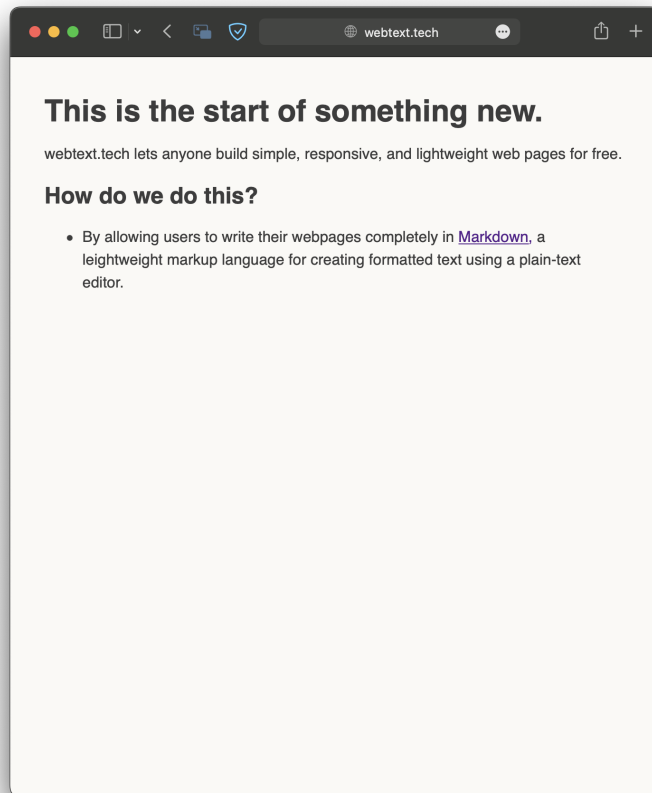

```
# This is the start of something new.

webtext.tech lets anyone build simple,
responsive, and lightweight web pages
for free.

## How do we do this?

- By allowing users to write their
webpages completely in [Markdown,]
(https://en.wikipedia.org/wiki/
Markdown) a lightweight markup
language for creating formatted text
using a plain-text editor.

Outcome

Users who are seeking to develop their websites will find our innovative conversion service easy to use and risk-free.

Our webpage provides users instructions on how to upload their web documentation clearly.

webtext.tech links references for users who need further explanation on specific webpage parameters.

webtext.tech is a [no-code](#) web service.

Utilizes HTML and CSS.

Completely ad-free, always. We are not seeking a profit from our user base.

Users will be able to produce their websites passively and easily, all for free.

Our mission is to afford developers and users the right to speedy internet access and low barriers to entry to web development so that they can access the web without inhibition.
